

Report on Testing of AMwand (Amized Fusion Technology device) by Amega Global

February 7th, 2010

General Description:

The AMwand (manufactured by Amega Global) is a device infused with *AMized Fusion Technology*, a proprietary name referring to the harnessing of *zero point field energy*.

The Vibra Scan 1100 “scalar” (*scalar* is a general term for this type of instrument, based on the principles of scalar energy and scalar waves), was used to test the effects of the AMwand. The “scalar” measures the vibration rate of the energy contained in each sample in megahertz per second (MHz). Anything measuring lower than 200 MHz is considered to be low in vitality (i.e., unhealthy). Anything measuring higher than 200 MHz is considered to be high in vital force, or consciousness, able to easily support life and wellbeing. See under Additional Information for further details on this instrument.

Subjects and Witnesses Present during the Testing:

An experienced healing practitioner operating the scalar machine participated in the testing as well as Silvana Spano and Patrick Coady.

Procedure:

Samples were taken before and after exposure to AMized Fusion Technology. For the food and water samples, one wand was rotated in a clockwise circular motion approximately two inches away from the sample for approximately 2 minutes before re-testing.

For the human subjects, two wands were used (at the same time) for approximately 3 minutes in duration. The clockwise motion was applied above the injury site (for the nerves in the practitioner’s right arm and hand) and toward the face and body for the test on change in overall energy. The wands were approximately 2-3 inches away from the human body when in use.

The two AMwands used during the testing session were first measured in the scalar device. Their vibration rates measured at 1,254.6 MHz and 1,216.7 MHz.

Results:

Samples were measured in MHz.

BEFORE EXPOSURE TO AMized Fusion Technology (zero point field resonance):

Tap Water	Grape	Cashew Nut	Patrick's Energy	Silvana's Energy	Nerves in practitioner's right arm and hand
2.1	2.8	2.3	216.7	216.3	2.6

AFTER EXPOSURE TO AMized Fusion Technology (zero point field resonance):

Tap Water	Grape	Cashew Nut	Patrick's Energy	Silvana's Energy	Nerves in practitioner's right arm and hand
350	222.7	222.3	468	442.3	360

Discussion:

As the readings show, the water samples and the injured area of the practitioner's body increased well over 100 times in vitality, the food samples increased approximately 100 times, and the already-healthy energy fields of the two subjects tested nearly doubled in vibration rate.

These results appear to support Amega Global's explanation that the AMwand and other AMized Fusion Technology products can rapidly energize the human electromagnetic field and body (as well as all other organic matter) to promote health. It is hypothesized that the ample supply of vital energy made available to the organism in this manner induces a state of homeostasis, or balance. This is what triggers the natural self-healing mechanism of each individual to produce the changes necessary for cellular and/or energetic repair and improvement.

There appears to be a strong correlation between this process and the experiential results observed by many during the live demonstrations being organized by the company's independent distributors to show the effects that this technology has on immediate pain relief, increase in strength and flexibility, and the positive changes detected in the taste of food, water, wine, etc.

Additional Information:

The Vibra Scan 1100

"This instrument operates on principles based in Quantum Physics. These principles reveal that everything in our universe is made of energy that vibrates, thus producing molecular frequencies that can be coded numerically as 'rates'. Therefore everything has an energetic signature that is singular or unique to any given person or object.

The Vibra Scan 1100 is a subtle energetic response interface that is centered on a specimen placed in the main analysis well. Examples of a specimen may be a hair sample, saliva sample, picture, voice print, water sample, house dust, or possibly other representative articles from the person or object being scanned."

The above description on the Vibra Scan 1100 was quote directly from
